Allowable Subject Matter

Claims 1-16 allowed as a result of Interview Conference on December 10, 2007.

The closest relevant art is Mitchell (3,853,517) wherein Mitchell teaches a vacuum cleaner comprising a housing (10), a nozzle inlet (30), a dirt cup (14) carried on the housing, the dirt cup (14) including a dirt collection chamber, a filter assembly (16) including a filter housing (18) defining a filter chamber, and the filter housing (18) mating with the dirt cup (14) (see 26 in Fig. 1), and a filter element (22) held in the filter chamber (18) in the filter housing (10). Mitchell further teaches the filter housing (18) having a base (at 26), a sidewall (16) and a top (20) and the base including an inlet opening in fluid communication with the open end of the dirt cup (14) (see Fig. 1, col. 2, lines 15-26). Mitchell further teaches the filter assembly (16) further including a ribbed filter support (see 28 in Fig. 1) having a cavity to house a concave or a frustoconical filter element (see 22 in Fig. 1), and the vacuum cleaner further comprising a filter screen (36) held by the base across the inlet opening (see Fig. 1). Mitchell further teaches the dirt collection chamber being cylindrical in shape (see Fig. 1) and the inlet (30) being tangentially directed with respect to a sidewall of the dirt collection chamber.

Claims 1-16 of this instant patent application differ from the disclosure of Mitchell in that the invention calls for a vacuum cleaner with a nozzle inlet, a suction generator carried on the housing, and a filter assembly including a filter housing defining a filter chamber wherein the filter housing and the filter chamber are mated with the open end of the dirt cup.
